

WHAT IS TOOLDEFEND?

Tooldefend is an autonomous alarm system that works independently of your vehicles CAN Bus system. Two intelligent sensors are programmed to identify the frequencies of cutting tools typically associated with a criminal attack. Our sensors have accelerometers to detect any movement on the side or back doors and the software is programmed with a "heartbeat" which when disturbed will trigger the talking 120db siren. This unique technology has been developed to protect your vehicle completely keeping your tools, trailers and roof racks safe.

TOOL THEFT HAS INCREASED BY 65% OVER THE LAST 2 YEARS

WHY USE TOOL DEFEND?

If you own a van and valuable tools, for your business to run efficiently on a day to day basis, you are taking a huge risk if you don't put extra security measures in place to prevent theft. Consider the effects of having your tools stolen:

- Loss of a day or weeks work – timescale changes affecting other trades
- Downtime spent replacing tools and sorting out vehicle repairs
- Loss of customer contract
- 'Repeat Target' - thieves return weeks later
YOU ARE A SOFT TARGET!

INSTALLATION

Tool Defend can be self-installed, however it is recommended that the system is installed by a professional auto electrical installer. Upon order confirmation and payment, a manual is issued via email to the installer. Installation typically takes 1 hour.

ToolDefend was a no-brainer for me. We had a few vans targeted recently where I live, and I am always hearing about mates who've lost thousands on tools being stolen. I wanted extra security and to know if an attack is attempted. It was easy to order online and I arranged for a professional install.

Worth every penny.
