## Site Minder Fitting Instructions

1. Connect pressure switch to suitable service line or manifold.
2. Up to 4 pressure switches can be fitted to this alarm. The system comes with one pressure switch as standard.
3. Fit the alarm unit to a suitable mounting location and connect the power lead through the dash mounted mute switch.
4. Adjust the pressure sensor on the switch to suit the machine (20-50 bar).  
Apply oil tolerant thread locking / retaining compound on the end of the screw to prevent it vibrating loose (i.e. Loctite Threadlocking, Nutlock 243).
5. Connect the cable and firmly push the boot over the pressure switch (connections are not polarity conscious).
6. Connect the sensor cable to the alarm (does not matter which connection you use as they are all linked electronically).
